POLICY ON WASTE MANAGEMENT

This institute has successfully implemented a comprehensive and well-developed waste management system, significantly enhancing its efficiency and sustainability. The following waste management practices have been adopted:

1. **Solid Waste Management:** Efficient systems for the segregation, collection, and disposal of non-hazardous waste materials, including paper, plastics, and organic waste, ensuring minimal environmental impact.
2. **Liquid Waste Management:** Proper disposal and treatment processes for liquid wastes, such as wastewater and chemicals, to prevent contamination of water sources and promote water conservation.
3. **Biomedical Waste Management:** Strict protocols for handling, storing, and disposing of biomedical waste to avoid contamination and ensure compliance with health and safety standards.
4. **E-Waste Management:** A system for collecting and recycling electronic waste, including old computers, phones, and electrical appliances, to reduce environmental harm and recover valuable materials.

Ramnagar Dist. Hanamakonda- 506001, (T.S)

5. **Waste Recycling System:** An effective recycling process that involves sorting and reprocessing materials like paper, plastic, and glass to reduce the consumption of raw materials and lower waste generation.
6. **Hazardous Chemicals Management:** Safety measures for the proper storage, handling, and disposal of hazardous chemicals to prevent accidents and protect both human health and the environment. These systems contribute to the institute's overall goal of sustainability and environmental stewardship, promoting resource conservation and minimizing waste generation across various waste categories.

1) Solid Waste Management

To manage solid waste efficiently, garbage bins have been placed across various departments for the collection of biodegradable and non-biodegradable waste from multiple sources. The Greater Warangal Municipal Corporation (GWMC) handles the disposal of the waste on a daily basis. The institution ensures that the waste is properly segregated at the source, and the segregated waste is disposed of responsibly. This approach helps in promoting sustainability and maintaining cleanliness in the institution.

Compost

The campus has a well-organized composting system that benefits both waste disposal and gardening. Here's how this system works:

1. **Composting Pit:** The composting pit is a designated area where plant waste (like leaves, branches, and grass clippings) and food scraps are collected. The composting process involves the breakdown of organic materials by microorganisms, turning them into nutrient-rich compost.
2. **Waste Disposal:** Plant and food waste are disposed of in the compost pit. This helps reduce the amount of organic waste going to landfills and minimizes waste-related pollution.

(Approved by AICTE & PCI, New Delhi & affiliated to Kakatiya University, Warangal, T.S)
Ramnagar Dist. Hanumakonda- 506001, (T.S)

3. **Compost for Fertilizer:** Once the organic waste has broken down and transformed into compost, it is used as a natural fertilizer for the campus's plant gardens. This compost enriches the soil, providing essential nutrients that promote healthy plant growth. It's a sustainable cycle where waste is reused to nourish new plant life.

2) Liquid Waste Management

A comprehensive water management and waste disposal system aimed at preserving hygiene, promoting sustainable practices, and ensuring the safe treatment of various waste streams. Here's a breakdown of the key elements of this system:

- 1. Regular Cleaning of Sewage Lines:** The sewage lines are cleaned and bleached regularly to maintain hygiene. This practice helps in preventing blockages, controlling odors, and ensuring the smooth flow of wastewater.
- 2. Proper Disposal of Laboratory Liquids:** Laboratory liquids are carefully managed to avoid improper disposal into trash or storm drains. Ensuring that these liquids are not disposed of irresponsibly is crucial for environmental protection, as harmful chemicals can contaminate soil and water sources.
- 3. Monitoring Discharge into Sewage Lines:** Any liquid discharge from laboratories into sewage lines is closely monitored to ensure that no dangerous compounds escape into the pipes. This step is vital for protecting the water treatment system and the environment from contamination by hazardous substances.
- 4. Use of Wastewater for Gardening:** Wastewater is utilized for gardening purposes, which is an excellent way to recycle water and reduce the need for fresh water for irrigation. Using treated wastewater in this manner promotes sustainability and helps conserve potable water.
